Project Business Case

Approval date: January 10th, 2021 **Last revision date:** February 15th, 2021

Contribution to business strategy

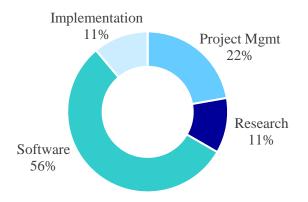

- Our strategy is to provide the best product design in the industry and current situation does not depict this
- The new feedback management system will assist in collecting customer feedback and update design strategies which align with company strategy

Benefits

- Better product design: Currently 7% of the products are returned due to defect in product design
- Increased sales: Customer feedback will ensure all the required features are available in the product
- Customer loyalty: Improved product design will ensure customers are not using alternative solutions
- Improved NPS: Increase in net promoter score

Costs

Project Mgmt	\$ 40,000
Research	\$ 20,000
Software	\$ 100,000
Implementation	\$ 20,000
Total	\$ 180,000

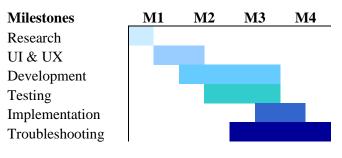

Project name: Product feedback managementProject sponsor: Director of product developmentProject manager: Raj Oak

Options considered

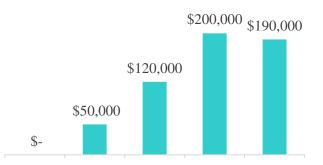

Alternatives	Impact	Timeline	Score
Dedicated team	4	2	8
Usability research	5	1	5
Automated system (Selected)	3	3	9

Timescale

Return On Investment

- Returns are expected to generated from second year of system installation as the product design cycle take time
- The expected feedback will help develop new products, update the current products and define marketing strategies
- Year 4 is expected to have highest gains

Risks

- The project is well defined but there are still some unknowns regarding project implementation and training
- There is also a risk that the project does not meet the product design teams needs and customer expectations
- The insights generated from the project may not represent all the customer segments, for these reasons it is
 recommended to involve engineering and marketing team closely

Project Charter

Approval date: January 10th, 2021 **Last revision date:** February 15th, 2021 Project name: Product feedback managementProject sponsor: Director of product developmentProject manager: Raj Oak

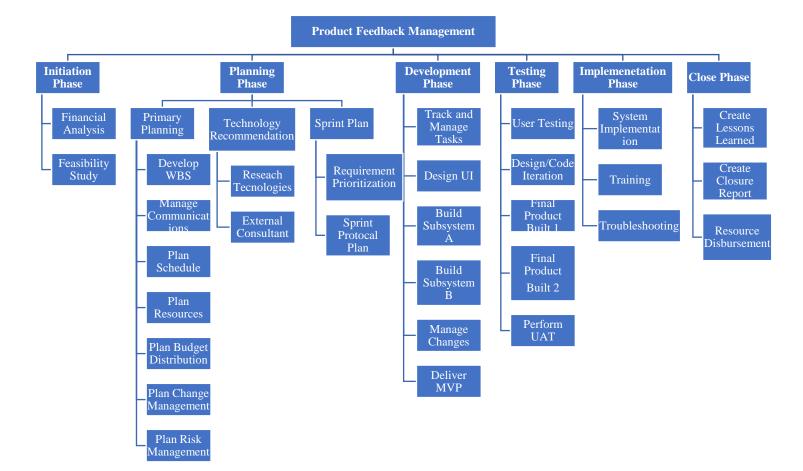

Scope An APFM system will be implemented to assist product design and marketing team to understand product requirements and marketing strategies. Other teams such as sales, supply chain, procurement, etc. are out of scope. Business Case To increase overall product alses by 35% from current levels. To reduce unrecorded feedback to 0% and product returns to 5%. To increase NPS (net promoter score) by 10 points. Constraints Immed 4 months (total 6 milestones) 1 design engineer + 1 marketing associate + 3 developers Scope TBD Quality Professional feedback collection system on customer end Project Deliverables An APFM system to assist product design and marketing team + training + support during the implementation phase of the system Benefits (measurable) KPI Baseline/month Goal/month Steering Committee CEO Project 1 x Design engineer Key Stakeholders Of Product returns Three see in product sales Project Learn 1 + x Design engineer Key Stakeholders Name (CEO) Increase in sales 3 x Developers 3 x Developers	Project Description	To implement new automated product feedback management (APFM)system to ensure collection and management of feedbacks from various product users

Risks: The project team has never worked together which can lead to extended storming and norming time. Also, the scope of the project is not fully defined at this stage which can lead to scope creep in future.

Work Breakdown Structure

Approval date: January 10th, 2021 Last revision date: February 15th, 2021 Project name: Product feedback managementProject sponsor: Director of product developmentProject manager: Raj Oak

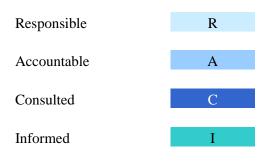

Objective: The objective of the work breakdown structure (WBS) document is to illustrate project planning, resource management, and prevent project scope creep. The list starts with deliverables and goal is broken down into work packages and tasks to make sure everything is covered in planning phase.

Risks: It is crucial that primary planning must be done considering all the future variables and risk mitigation strategies should be ideated, failure to do so can lead to scope creep with increase in budget.

RACI Matrix

Objective: The objective of the RACI matrix is to identify and define roles and responsibilities of involved stakeholders. The matrix defines who is Responsible, who is Accountable, who is Consulted and who should be informed of each task.

	Project	Business	Design	Mrkt.	Software	Dir. Prod.	Mrkt.	
Project Tasks	Manager	Analyst	Engineer	Associate	Developer	Dev.	Manager	CEO
Initiation Phase								
Finanical Analysis	А	R				l I	1	С
Feasibility Study	R	С				l I	1	1
Planning Phase

Development Phase								
Design UI		А	1		R			С
Create MVP	l I				R			L.
Testing Phase								
User Testing	R		А				С	- L.
Design/code Iterations	l I		А		R			- I -
Implementation								
System Implementation	I	R	С	С	А			- E
Training	А	R				l I	1	1
Troubleshooting	R	С			R			- E
Close Phase								
Create Lessons Learned	R	С					l I	- I -
Create Closure Report	R					l I	1	l I

Risks: The business analyst and the software development team has not yet been defined and can affect the timeline if the members have limited experience with design projects.

Project Communication Plan

Approval date: January 10th, 2021

Last revision date: February 15th, 2021

Project name: Product feedback managementProject sponsor: Director of product developmentProject manager: Raj Oak

Objective: The objective of the project communication plan document is to effectively communicate and share information among various stakeholders. The document mentions the channels and frequency of communication with different members in the organization.

Communication	Channel	Frequency	Goal	Owner
Project team				
Team standup-Trello	Zoom/In-person	Daily	Discuss the previous day's, present day's tasks and issues/support needed for each team member	Project Manager
Task Update- TeamGantt	Zoom/In-person	Daily	Share daily progress made on project tasks	Project Manager
Project review	Zoom/In-person	Weekly	Present project deliverables, gather feedback, next steps, timeline updates	Project Manager
Project status report	Report	Weekly	Review project status, discuss potential issues and mitigation strategies	Project Manager
Post-morten meeting	Zoom/In-person	End of project	Discuss what worked and what not worked and actionable takeaways	Project Manager
Management team/Sponsors				
Project status report	Report	Weekly	Review project status, update on potential issues and mitigation strategies	Project Manager
Project review	Report	At milestones	Present project deliverables, gather feedback, discuss next steps	Project Manager
Final report	Report	End of project	Compile all the planning, scheduling, planned vs actual data, team member performance, deliverables, lessons learned, and key takeaways	Project Manager

Risks: Communication protocols may not be followed by all stakeholders. Project manager needs to inform all the members about the communication plan and alleviate any issues faced by any team member or stakeholder.

Risk & Issue Log

Approval date: January 10th, 2021 Last revision date: February 15th, 2021 Project name: Product feedback managementProject sponsor: Director of product developmentProject manager: Raj Oak

Objective: The objective of the risk and issue log is to document every possible risk and issue that is faced during various project phases for deciding the number of resources and time to be invested in mitigating them based on the priority level.

Risk ID	Risk Description	Impact Description	Impact Level	Probability Level	Priority Level	Mitigation Notes	Owner
ID No.	Summary	Consequences of failure to risk mitigation	1 (Low) to 5 (High)	1 (Low) to 5 (High)	Impact x Probablity	Notes to lower impact and reduce probability	Responsible party
1.1	Feasibility parameters not calculated correctly	Scope creep and potential budget increase	4	2	8	Consult business analyst and external consultant	Product manager and Project manager
2.1.1	Members not responding to messages	Confusion and scope creep	4	3	12	Establish communication protocols early in the project	Project manager
2.1.2	Stakeholders requesting additional system specifications	Scope creep and budget increase	3	2	6	Establish change management system and communicate with stakehoders	Project manager
2.3.1	Sprint taking longer time	Increased overall timeline	4	2	8	Define sprint protocol and communicate with team	Software developer
3.1	Tasks not managed properly	Confusion, task overlap, scope creep	5	3	15	Use scheduling softwares, strong communication with team	Project manager
5.1	Excessive bugs during system integration	Project benefits will not be realised, no ROI	5	2	10	Provide substantial time to developers for this task, consult external consultants	Software developer
6.1	Lessons learned not documented properly	No knowledge transfer to the next project	3	2	6	Make use of risk and issue log and document every entry	Project manager

Risks: Failure to record any issue or risk can lead to incomplete lessons learned document
